

README for Occlusion Test Report

– for application Milestone by Arsenal

The Excel-sheet includes the results from all the tests we get from the occlusion tests. We have in the Excel-sheet deleted the results when we tried if the occlusion app was working, this because we had some problems with application crash. We have also a special field for the Occlusion tests with the old application, this because of problem with the connection when we did the tests at a library with public wifi.

The tests we made:

Test 1: Make a Fuelstop and accept the 1st.

Taskname: Accept

Testname: Fuelstop

Variantname: Accept 1st

Test 2: Make a Foodstop and cancel the process.

Taskname: Cancel

Testname: Foodstop

Variantname: 1

Test 3: Make a Toiletstop and choose the 3rd.

Taskname: Skip

Testname: Toiletstop

Variantname: Accept 3rd
